SUMMARY

Data analyst and AI automation engineer who turns business data into decisions and automates them. Builds SQL and Python analyses (funnels, cohorts, RFM, A/B tests) on ClickHouse with Metabase dashboards, and production-minded automations with n8n and the Claude API: agents with guardrails, structured outputs and measured evaluations.

EXPERIENCE

Automation Engineer · ZenApp Studio Sep 2025 – Present

- Build AI-powered workflow automations in n8n for business processes.
- Developed email automation agents with summarisation, filtering and automated replies.
- Built RAG chatbots with automated knowledge ingestion from Google Drive, and Telegram agents for notifications and commands.
- Implemented AI sentiment-analysis pipelines storing structured results in Airtable.

Data Analytics Trainee (Remote, project-based)

- Supported data analysis and reporting on projects for a car-wash marketplace platform and a point-of-sale (POS) software company.

SELECTED PROJECTS

Ask Your Data: text-to-SQL agent Claude API · Python · ClickHouse · Streamlit

- Claude agent that answers business questions by writing read-only SQL; returns structured answers with the query used.
- Passed 54/54 evaluation cases (incl. missing-data traps and prompt-injection attempts) at ~1¢ and 6 s per question; ran ablations and a model comparison; three guardrail layers including a read-only database user.

E-commerce Analytics: funnels, cohorts & RFM ClickHouse · SQL · Metabase · n8n

- Analysed 1.2M events with windowFunnel/retention and RFM segmentation; found a mobile checkout gap (46% vs 78%) worth ~AED 7.5M/year at half-closure, and a promo cohort with 4.6× lower repeat rate.
- Automated a weekly n8n export of at-risk high-value customers with a suggested action for the CRM team.

A/B Test Analysis: mobile checkout redesign Python · pandas · SciPy · statsmodels

- Power analysis, SRM check, z-test with CIs, bootstrap for skewed revenue, Holm-corrected segments, interaction and novelty checks.
- Recommended an iOS rollout: +5.4 pts completion ($p < 0.001$), ~AED 2.3M/year sized on the post-novelty lift.

AI Anomaly Alerts for Google Ads n8n · Claude API · ClickHouse · Telegram

- SQL detects daily cost spikes; Claude explains cause, evidence and actions via JSON-schema output; alerts logged and sent to Telegram.
- Backtest over 370 days: 3/3 incidents caught, 0 false alarms after adding a marketing-calendar guard; ~3.5¢ per alert.

Marketing Analytics Pipeline n8n · ClickHouse · Metabase · Docker

- Daily Google Ads → ClickHouse load with gap backfill and a data-quality gate; Metabase dashboards for ROAS, CPA and trends.
- Insights memo identified 3 budget leaks worth ~+17% conversions at the same spend.

Portfolio projects use synthetic data; code and case studies on GitHub.

SKILLS

Analytics	SQL, ClickHouse, Python (pandas, SciPy, statsmodels), A/B testing, cohort & RFM analysis, Metabase, Jupyter
AI & automation	n8n, Claude API (tool use, structured outputs), LLM evaluation, RAG, prompt engineering, ChatGPT, Claude Code
Engineering	Docker, REST APIs, Node.js, Git & GitHub, Streamlit, data-quality checks
Integrations	Google Ads API, WhatsApp API, Telegram bots, Google Sheets & Drive, Airtable

COURSES & LANGUAGES

Courses: Data analytics, SQL and Python coursework (DataCamp, Udemy).

Languages: English, Arabic, Hindi, Malayalam.
