SUMMARY

Data analyst and AI automation engineer who turns business data into decisions and automates them. Builds SQL and Python analyses (funnels, cohorts, RFM, A/B tests) on ClickHouse with Metabase dashboards, and production-minded automations with n8n and the Claude API: agents with guardrails, structured outputs and measured evaluations.

EXPERIENCE

Automation Engineer · ZenApp Studio Sep 2025 – Present

- Built and maintained live dashboards on production databases for a UAE car-services marketplace and an Oman-based tech company, covering sales, operations and customer reporting.
- Build AI-powered workflow automations in n8n, including email agents with summarisation, filtering and automated replies.
- Built RAG chatbots with automated knowledge ingestion from Google Drive, Telegram agents, and AI sentiment-analysis pipelines storing results in Airtable.

AI Engineer (Part-time) · Manycon, Qatar 2025 – Present

- Built automated daily reporting and audit workflows that pull marketing and ads data, apply checks and deliver structured reports to the team.
- Connected data sources via APIs and automated report delivery (incl. WhatsApp), cutting manual reporting effort and surfacing performance issues faster.

SELECTED PROJECTS (synthetic data; code and case studies on GitHub)

Ask Your Data: text-to-SQL agent Claude API · Python · ClickHouse

- Claude agent that answers business questions with read-only SQL and returns the query used; passed 54/54 evaluation cases (incl. prompt-injection attempts) at ~1¢ and 6 s per question, with three guardrail layers.

E-commerce Analytics: funnels, cohorts & RFM ClickHouse · SQL · Metabase · n8n

- Analysed 1.2M events; found a mobile checkout gap (46% vs 78%) worth ~AED 7.5M/year at half-closure and a promo cohort with 4.6× lower repeat rate; automated a weekly at-risk customer export.

A/B Test Analysis: mobile checkout redesign Python · pandas · SciPy · statsmodels

- Power analysis, SRM check, z-test, bootstrap, Holm-corrected segments and novelty check; recommended an iOS rollout (+5.4 pts completion, $p < 0.001$, ~AED 2.3M/year).

AI Anomaly Alerts for Google Ads n8n · Claude API · ClickHouse · Telegram

- SQL detects daily cost spikes and Claude explains cause and actions via JSON-schema output; 370-day backtest: 3/3 incidents caught, 0 false alarms.

Marketing Analytics Pipeline n8n · ClickHouse · Metabase · Docker

- Daily Google Ads → ClickHouse load with backfill and data-quality checks; Metabase dashboards and a memo identifying ~+17% more conversions at the same spend.

SKILLS

Analytics	SQL, ClickHouse, Python (pandas, SciPy, statsmodels), A/B testing, cohort & RFM analysis, Metabase, Jupyter
AI & automation	n8n, Claude API (tool use, structured outputs), LLM evaluation, RAG, prompt engineering, ChatGPT, Claude Code
Engineering	Docker, REST APIs, Node.js, Git & GitHub, Streamlit, data-quality checks
Integrations	Google Ads API, WhatsApp API, Telegram bots, Google Sheets & Drive, Airtable

COURSES & LANGUAGES

Courses: Associate Data Analyst track, DataCamp (in progress); data analytics, SQL and Python coursework (DataCamp, Udemy).

Languages: English, Arabic, Hindi, Malayalam.
